

# CCH

## Computerized Criminal History

A SOLUTION THAT PROVIDES INSTANT, MISSION CRITICAL ACCESS TO CRIMINAL HISTORY

KOLOGIK's Computerized Criminal History (CCH) record information system provides instant, mission-critical access to criminal history for hundreds of external agency stakeholders, including local law enforcement, booking agencies, courts, and correctional institutions. In addition to storing data, almost any middleware layer can extend CCH to provide important additional functions, such as business intelligence, content management, collaboration, redundancy, disaster recovery, and performance monitoring.

KOLOGIK's CCH addresses the need for a system that extends beyond the boundaries of local applications and data repositories. It also creates a robust and flexible infrastructure that will interface with a wide variety of systems and content management solutions for both internal and external uses.

KOLOGIK views its CCH solution as a suite of applications that must evolve with customers, rather than maintain the features it had the day that it went live.

# FEATURES

CCH manages all the personal and identification data of the state including arrests, court data, convictions, dispositions, and many others.

Features include:

- ▷ High-speed Transaction Processing
- ▷ Easy Electronic Entry
- ▷ Robust Search Capabilities
